

FULL PITCH (ENGLISH VERSION)

Speaker: Steeve Yenot

Target Audience: Diaspora and African residents (CEMAC zone and beyond)

Estimated Time: 45-50 minutes

Slide 1: Title (0-5 min) "Hello everyone and welcome. Today, we are going to talk about something very concrete: Your real economy. The goal of this Masterclass is not to sell you yet another tech product, but to give you a financial passport. A hard currency account, in dollars or Swiss francs, designed simultaneously for the diaspora and residents of the continent, so you can keep growing your business without being held back by borders."

Slide 2: The Objectives (5-8 min) "Why are we here?"

1. Demystify. Understand why the world is changing and stop confusing real technological tools with internet casinos.
2. Free your action. Give you the immediate ability to pay anywhere.
3. And above all, create network power. We are building a community solution. By pooling our flows, we will, together, break the ceilings that limit us."

Slide 3: The Funnel Problem (8-11 min) "The observation is simple. On the left, you have incredible energy: your ambitions, your funds, your business. On the right, the global market waiting for you. But in the middle, look at this funnel flashing red under pressure: it's the local banking system. Whether you use FCFA in the CEMAC zone, Naira in Nigeria, Cedi in Ghana, or Shilling in Kenya... these national currencies are under enormous pressure. Central banks block transfers due to a lack of hard currency. Result: your energy is stopped, and only a few drops painfully make it to the international market. The money is there, but the pipe is clogged."

Slide 4: Who am I? (11-14 min) "For those I haven't had the pleasure of meeting yet, I'm Steeve Yenot. I spent 20 years in high-level industry. My job as an engineer is to spot these famous bottlenecks and find the infrastructure to clear the blockage. Faced with the challenges of my partners in Africa, I audited the global financial system with this engineer's eye to find the way out."

Slide 5: The Partner (14-16 min) "That's how I crossed paths with Oscar Flores, founder of our partner platform and one of the 300 wealthiest people in Switzerland. What he brings is the missing piece: the legal and institutional infrastructure. He merged the relentless security of Swiss banks with the speed of new global technology."

Slide 6: Geopolitics & Demystification (16-20 min) "But let's talk about this technology. Let's demystify things. Forget Bitcoin and speculation! We are not going to pay a supplier with an asset whose price changes every hour. We use the Digital Dollar (Stablecoin). 1 token will ALWAYS be worth 1 dollar. The US government has just validated this technology to maintain dollar dominance. It's no longer a game; it's the new economic rail of the superpowers."

Slide 7: Macroeconomic Tension (20-22 min) "The world is split in two. On one side, the traditional banking ship that stores money but is slowed down by regulations and currency shortages. On the other, the fluid rails of Mastercard, which are very fast, but which the ship struggles to feed. This tension is what blocks your business."

Slide 8: The Secure Network Solution (22-24 min) "The solution to bypass the single teller is the Blockchain network. Instead of a banker manually validating your transfer in 48 hours depending on their mood, thousands of computers worldwide mathematically verify the operation in seconds, 24/7."

Slide 9: Strategic Separation (The Hybrid Model) (24-26 min) "And here is our secret: The Hybrid Model. Unlike the 'pure crypto' world where you are isolated from the real economy, we rely on existing financial rails. Step 1: We secure the value in a 'modern vault' on your phone using the speed of the Blockchain. Step 2: We connect this vault directly to the traditional Mastercard rails. You get the freedom of the new world, connected to the universal acceptance of the old world."

Slide 10: Institutional Security (26-28 min) "This vault is rock solid. For every digital dollar on your phone, a real US dollar is locked in a physical bank. US financial authorities require regular audits. It is pure institutional security."

Slide 11: 4-Step Architecture (28-30 min) "In practice, it's transparent:

1. Deposit: You load with your local currency.
2. Digitization: The system converts it instantly.
3. Securing: The money arrives in your USD/CHF account with us.
4. Action: You pay the very next second."

Slide 12: Deposit Methods (New) (30-33 min) "A logical question then arises: how do you actually make this deposit (step 1) from Africa? We have three channels available to you. First, **the classic international wire**: but we know its limitations. Delays of several business days, heavy bank traceability, and the strict obligation to use an account in your exact name or a declared linked B2B account. Second, **Credit Card Top-up**: this is our most popular method. It's instant and processes on your bank statement just like buying an item online, which gives you increased confidentiality from your local bank. The only constraints are the limits set by your card provider and the requirement to have a Visa or Mastercard with active international payments. Please note: no AMEX. Third, **Crypto Wallet transfer**: you can send USDC or USDT directly. The ERC20 network is already active on our platform, and we will very soon integrate the Polygon and BEP20 networks to drastically reduce your transfer fees."

Slide 13: Real Life (Slow Wear) (33-36 min) "Take the importer blocked by a bank lacking dollars. With us, he jumps over this barrier, and the goods ship the same day. But look further: The Community Loop. If each of you uses this system to upload weak currencies to our platform, our group's global liquidity increases. By uniting, we create a network effect that slowly wears down the barriers of the classic system."

Slide 14: World Debit Card (36-38 min) "To execute this, we provide the 'World Debit' level. Up to 100,000 USD in merchant payments per day. Up to 25,000 USD in ATM cash withdrawals. Money is no longer an obstacle."

Slide 15 & 16: Coverage and Discretion (38-41 min) "This is legal and monitored in Switzerland and the US. That's why we offer Operational Confidentiality, not opacity. We verify identities, but once validated, your flows are separated. Your local bank no longer needs to know how many servers you are buying in Asia."

Slide 17: Opening Options (41-43 min) "Let's take action. Two entry doors: The Standard package at \$600. And the choice of 95% of entrepreneurs: The Premium at \$1,000. It includes VIP support, optimized fees for large volumes, but above all, exclusive access to our Level 2 Masterclass and entry into our private Africa-Diaspora entrepreneur network."

Slide 18: Network Power (Referral) (43-45 min) "To build this community, we pool our strengths. For every entrepreneur in your network you help break their ceilings by opening a Premium account, we give you \$100 cash back. It's our way of financing the growth of this alternative network with you."

Slide 19 to 22: Process, Conclusion & Q&A (45-50 min) "The process is simple: contact me on WhatsApp, we have a private call to validate your profile with total discretion, and we get started. The world is digitizing. Don't wait for the banking funnel to suffocate your business. Take your independence today. The link is in the chat, let's open the floor to questions!"
