

Masterclass Script (English Version)

Speaker: Steeve Yenot **Target Duration:** 45-50 min (excluding Q&A)

Slide 1: Title (0-5 min)

Let people settle in, welcome them warmly. "Hello everyone and welcome to this Masterclass. Today, we are not going to talk about the stock market, nor complicated speculation. We are going to talk about **privacy for your money and true freedom to make your purchases or withdraw cash.**

Since we are a small group today (under 10 people), I would like us to start with a quick introduction round. It's much more friendly and it will allow me to tailor what I'm going to say to your needs. **Could everyone briefly introduce themselves: your first name, your profession, and most importantly, why did you decide to join us today? What do you expect from this Masterclass?**

(Let each participant introduce themselves, reply with a kind word, note a key point of their needs).

Thank you very much for sharing, that's very clear. My goal today is simple: to open your eyes to how you can transform what you earn into a payment capacity that works anywhere in the world, without asking for permission."

Slide 2: Objectives (5-7 min)

"Before seeing how it works, here is why we are here. The first goal is to **understand how the rules of money are profoundly changing right now.** Then, it's to show you that there is a practical and completely legal solution that works in more than 170 countries. And finally, my desire is to build **a circle of informed people**, who know how to protect their money and who can help their close network do the same."

Slide 3: Steeve Yenot (7-9 min)

"For those I haven't had the chance to speak with yet, my name is Steeve Yenot. I am not a banker. **I am an engineer, a process optimizer.** I spent 20 years in the industry looking at how things work, and finding out how to make them go faster and safer. Like all of you, I suppose, I was worried seeing the direction the global economy was taking. So I did what I do best: I analyzed the pipelines through which our money flows. And I tried to understand **how we could take back control so we wouldn't be blocked at the slightest transaction.**"

Slide 4: Oscar Flores (9-11 min)

"It is this long research that led me to cross paths with Oscar Flores. Oscar created a company called Unblock, and today he is among the 300 richest people in Switzerland. Why am I telling you about him? Because he brings what we were missing: **the technical structure**. His work made it possible to build a unique bridge: **a mix between the very strict security of the Swiss system, and the speed of new global technologies.**"

Slide 5: The impasse against AI (11-13 min)

"What is the problem today? Your bank is a single desk. However, with the explosion of computing and Artificial Intelligence, hackers are constantly attacking these desks. The bank's only solution to protect itself? **Slow down the whole system**. That's why they block your transfers for security, why they ask you for the same papers three times, why you have to wait until Monday morning. **To protect itself, the bank has turned your daily life into an obstacle course of slowness.**"

Slide 6: The solution (13-15 min)

"Facing this slowness, there is a new technology. Instead of having a single fragile desk checking everything by hand, **it's an entire global network of computers doing the mathematical security calculation instantly**. We call this the Blockchain, or community validation. The operation no longer waits on a banker's desk on Monday morning: it is infallibly validated in a few seconds, day and night. **It's fast, unhackable, and totally free.**"

Slide 7: The Current System (15-17 min)

"If we summarize today's situation, we have two worlds colliding. On one side, **the big ocean liner of your bank**: perfect for storing your savings, but very slow, heavily monitored, very heavy to move. On the other side, **the everyday payment rails** (the Mastercard network, cash): it's very fluid, you can pay everywhere very quickly. The real problem today is that this big slow ocean liner prevents you from quickly accessing that money to make your purchases."

Slide 8: The Separation (17-19 min)

"The solution for informed people is **strategic separation**. To avoid sinking under the heaviness of the banking ocean liner, they separate the place where they store the value, and the way they spend it. We replace the old bank vault with modern storage protected by computing, and we plug it directly into the Mastercard. **By using this technology today, you are ahead of everyone else.**"

Slide 9: The American Detonator (19-21 min)

"And this future is actually already here. In the United States, high finance on Wall Street is already using this system. Even better: **the American government is passing a law (the GENIUS Act) that encourages every citizen to store their money themselves, on their own phone ("Be your own bank").** *You might wonder why an American law interests us in Europe?* Because the United States sets the tempo. If they do this, it will trigger a global tidal wave in the use of this technology, and Europe will be forced to follow."

Slide 10: Separating the two "Cryptos" (21-23 min)

"Now, let's demystify a big word that often scares people: 'Crypto'. When we hear that on television, everything gets mixed up. In reality, we must separate two things.

1. On one side, you have the investment currency (like Bitcoin). Its price changes every day. It's meant for speculation.
2. And on the other side, you have **the payment currency, what we call a 'Stablecoin'.** And that is what we use! **One digital token of this currency will ALWAYS be worth exactly 1 Dollar.** There is no risk of its value dropping. It is simply a digital token created to travel very fast on the internet."

Slide 11: How does it hold up? (23-25 min)

"Of course, you're going to ask me: how can this digital token always be worth 1 Dollar? There is no magic. **For every digital dollar that exists on your phone, there is a real dollar locked in the vault of a traditional bank.** And it is very serious: the American state authority that monitors the markets (the SEC), spends its time verifying that this money really exists to protect the consumer."

Slide 12: The Simplified Mechanism (25-27 min)

"Simply put, how does it work for you? It's child's play in 4 steps.

1. You deposit money from your normal account or credit card.
2. This money is digitized: your Euros or Swiss Francs are transformed into these famous stable tokens to travel very fast.
3. Our system receives these tokens, and securely places them back into Swiss Francs or Dollars in your account with us.
4. **All you have left to do is use your card to spend or withdraw cash anywhere in the world."**

Slide 13: The Card (27-29 min)

"And this card is not an ordinary everyday card. It's a **Mastercard World Debit**, designed for people who need to have access to a lot of money without having to justify themselves. Look at the limits: **you can pay up to 50,000 CHF in a single purchase**, and **withdraw up to 25,000 CHF in cash from an ATM, every single day**. To obtain this level of card, there is a one-time order price of 320 CHF, and after that, there are zero monthly subscription fees."

Slide 14: Legal Security (29-31 min)

"Offering such freedom is only possible if we are irreproachable with the law. We are able to support you in more than 170 countries because our partner has all the official licenses. We are validated in Switzerland for the fight against money laundering, we are registered in the United States as a legitimate transfer business, and recognized by the central banks of other countries."

Slide 15: Discretion ≠ Opacity (31-33 min)

"I want to be very transparent with you on this specific point: **We offer discretion, we do not offer a way to hide from the justice system**. If you are looking for a way to open a fake anonymous account for bad reasons, this is not for you. We will strictly check your ID papers as the law requires. But once this check is done, **we guarantee the separation of your activities**. Your historical bank, where your savings are, will no longer be able to see what you buy on the internet or how much cash you withdraw on weekends with us."

Slide 16: In real life (33-35 min)

"Let's take two examples from real life. *Example 1:* You have to pay 40,000 CHF for computer servers abroad on a Friday evening. Your bank finds it suspicious, blocks the money, and asks you to call back on Monday morning. With our system, you load your card, **it is validated and paid in 2 minutes, on a Friday at 10 PM**. *Example 2:* You find a used car for 20,000 CHF on Saturday and the seller wants cash. The ATM at your neighborhood bank prevents you from withdrawing more than 2,000 CHF. With our card, **you go to the ATM, and you withdraw the 20,000 CHF right away**."

Slide 17: Who is this for? (35-37 min)

"Finally, who is this freedom for? For those who invest a little on the internet and want to use their gains in real life. For international entrepreneurs who travel or pay foreign bills. For people here, in Switzerland or Europe, who want to get back the right to have cash without asking for permission. Or **for people who, like us, want to share this solution with their network to build a great community**."

Slide 18: The Offer (37-40 min)

"What we are offering you today is the opening of the account and the delivery of this famous card. But above all, **it is the fact of being humanly supported, from A to Z, by our team, to configure all this without making mistakes.** The base price is **320 CHF**. But the idea is really to create a strong mutual aid network. So, **we give you back 20 CHF for each person who joins us thanks to you**, and even 10 CHF more for the friends of your friends! And to thank you for taking action, you will be entitled to free access to our future next-level Masterclass."

Slide 19: The Process (40-42 min)

"The golden rule is to never leave you alone. How does it work? 1. You contact us on WhatsApp. 2. **We take the time for a short private meeting** to fully understand what you need and validate your country. 3. We do the verification of your papers for legal compliance. 4. And we activate your card and your first deposit together."

Slide 20 & 21: Q&A (42-45 min)

(On Slide 20) "It's time to answer your questions. If you have questions about how it works in general, now is the time to raise your hand!" (Take 2-3 simple questions). (Move to Slide 21)
"However, we have a very strict principle at Drake Digital. **If your question concerns your taxes, where your money comes from, or cases related to your business, we will refuse to answer them in public.** These intimate questions will be settled during our completely private and confidential phone call with you."

Slide 22 & 23: Conclusion (45 min)

"The small application you will put on your phone is not a gadget. It is your entry key to much faster and much freer finance. The choice is yours: stay on the big slow boat, or switch to our new rails. **Your money. Everywhere. Without needing to ask for permission.** I will let you click on the WhatsApp link to book our private account creation session. Thank you very much for listening and for your exchanges at the beginning!"
